

Storm Drains and roadside ditches eventually lead to our inland lakes, Lake Erie and the Ohio River.

Composting yard waste helps keep “Only Rain Down the Drain.” Here are six benefits to composting your yard waste:

1. It will add nutrients to the soil.
2. Introduces valuable microorganisms and organisms such as good bacteria to the soil.
3. Allows for yard waste and kitchen waste to be recycled.
4. Reduces wasted space at your local landfill.
5. Composting is good for the environment.
6. Composting and then adding to your soil will help reduce acids and alkaline levels in your soil
