General Responsibilities !!!!!

As a property owner, you are responsible for all earthmoving activities on your property. The application for a Storm Water Permit Application is conditional. This means that based on the information submitted, you are required to follow the items indicated on the drawing, such as silt fence, diversions, temporary seeding, straw bales, etc. We have in the office pamphlets and publications to assist you on installing these practices if needed. A site investigation will be done prior to and during construction. Any additional site changes will be made to you in writing. This permit application gives permission for a representative of the county to make routine on-site inspections and evaluations at any given time. Always, before putting a shovel in the ground, call the **Ohio Utilities Protection Service (OUPS)** for location of utilities toll free 1-800-362-2764.

(Even mailboxes and sign post's can sever telephone, electric and television cable or gas line.)

The following are items that must be addressed on any new site:

1. The drive entrance is the first priority and shall be constructed prior to any earth disturbing work to prevent silt, dirt or debris from entering the roadway. It shall have sufficient stone or gravel to allow for delivery of building materials and contractors use and maintained through the life of the project. The discharge of water onto a public road must be limited
2. A sign or mailbox bearing the house number shall be erected as soon as this permit is granted. This aids us and other agencies in locating the site as well as emergency services if the need should arise.
3. Inspections will be made on a regular basis during construction and will formally begin once the owner calls us 48 hours prior to construction. Access shall be available during normal working hours of 8:00am to 5:00pm Monday – Friday for inspections and reviews until the permit has been finalized. If any corrections are required, the owner will make the corrections directly or order their excavator or an appointed person that has been approved to do so in a timely manner.
4. Once the earth moving and final grade has been established, you are required within 7 days to complete seeding and mulching of those areas. This is a critical time due to the loose soil conditions and the vulnerability to erosion.
5. The permit application will become the actual permit once all signatures have been made.
6. The permit requires strict adherence to regarding sub-surface drainage as permitted by law per Ohio Revised Code 307.85 located within the Richland County Stormwater and Sediment Control Regulations. In the event any sub surface tile are unearthed, damaged or located in such a fashion that it would interfere with construction, excavation is to cease and our office notified. It will be the responsibility of the owner to present a plan in writing to make such alterations and repairs as to not impede the flow of water or to re-direct it. It must have the approval of the Richland County Drainage Engineer before any changes take place.
7. Any silt fence required on the site is required to be trenched in 6" and staked firmly in the ground.

A 48 hour notice is required **prior** to any earth disturbing activity and also upon project completion.

PLEASE CALL 419-747-8686
